

AUGUSTO DANNA

AI Solutions & Full-Stack Developer

github.com/ADanna-PIECE/ALGOCODE

(+54) 011 2303 0667

augustomartindanna16@gmail.com

Buenos Aires, CABA

PROFESSIONAL PROFILE

Software Engineer specializing in rapid B2B solution building, AI automation workflows, and data architecture. Driven by agile delivery through AI-assisted development (Vibe Coding), orchestrating multiple LLM agents, and configuring custom Model Context Protocol (MCP) skills to optimize code efficiency. Proven ability to design end-to-end architectures: from mass data extraction (ETL) and multi-API orchestration to cloud deployment using Python, Flask, and Next.js.

PROFESSIONAL EXPERIENCE

AI Automation & Full-Stack Developer (Freelance) 2019 – Present

- AI Solutions Architecture: Orchestrated multiple agents (Claude/Gemini) in iterative development workflows, applying MCP and custom refactoring skills to ensure lean, scalable, and production-ready code.
- Data Engineering & Backend: Built robust ETL pipelines for processing massive time-series data (OHLCV) and integrated RESTful APIs running 24/7 on Google Cloud Platform (GCP) virtual machines.
- System Design: Integrated SQL and NoSQL (Firestore/MongoDB) databases, ensuring highly efficient data flows for performance-heavy applications.
- Quantitative Development: Programmed walk-forward engines in Python (OOP) for institutional validation, applying in-sample/out-of-sample testing and automated risk metric calculations.

Financial Data Analyst / Gizzi y Asociados 2020 – 2023

- Operations Analysis: Structured fiscal data, analyzed cash flows, and conducted financial auditing using corporate ERP software, optimizing administrative bottlenecks and internal reporting.

KEY PROJECTS

- **Growth Content Factory (Multi-API Agentic Workflow):**

Automated architecture for reverse-engineering viral content. Integrates Apify for mass data extraction and executes a concurrent validation loop across three different database APIs to select the best data without duplicates. Orchestrates LLMs to generate full content cascades (scripts, threads, images).

- **Trading Performance Tracker (Live Dashboard):**

Real-time interactive dashboard featuring a P/L calendar and detailed statistics by setup, day, and time. Incorporates a multi-agent AI module for continuous behavioral pattern analysis.

- **ALGOCODE & Visual Analyzer:**

Quantitative local framework built in Flask for historical backtesting. Utilizes custom hotkeys and computer vision models (Gemini) to automatically extract structured data from manual chart annotations.

- **NutriCam & FitCam:**

Scalable Full-Stack applications developed with Next.js and Firebase. Integrates computer vision APIs for photographic nutritional analysis and automated workout routine generation.

EDUCATION & TECHNOLOGIES

- Methodologies: Agent Orchestration, MCP (Model Context Protocol), Vibe Coding.
- Languages & Databases: Python (Pandas, NumPy, OOP), JavaScript/React, SQL, MongoDB.
- Infrastructure & Cloud: Google Cloud Platform (VM), Firebase, Vercel, Next.js, Flask.
- AI & APIs: Claude Code, Gemini Vision, Apify, OpenAI, Multi-API Architectures.
- Education: B.S. in Information Systems (Advanced Student) – Universidad de Buenos Aires.
- Languages: Spanish (Native), English (Upper-Intermediate / Technical fluency).
